

SHANTILAL SHAH ENGINEERING COLLEGE, BHAVNAGAR
APPLIED MECHANICS DEPARTMENT

Assignment No: 01

Date: 04-08-2022

Energy Principles [Professional Elective]

Sub Code 3150614

Title of Subject STRUCTURAL ANALYSIS - II

#	Questions
1	Determine the vertical deflection at free end in the overhanging beam as shown in Figure - 1 . Assume constant EI. Use Castigliano's method.
2	Find the displacement at C, as shown in Figure - 2 by using Castigliano's theorem. $E = 2 \times 10^4 \text{ N/mm}^2$.
3	Find the displacement of B, for Figure - 3 , by Castigliano's theorem. Sectional area varies linearly from A to B.
4	Determine the vertical and horizontal deflection at free end for Figure - 4 , by using unit load method. EI is constant.
5	State and explain Castigliano's first theorem.
6	Using Castigliano's first theorem, find horizontal and vertical displacement at R of frame as shown in Figure - 5 . Take $E = 2 \times 10^5 \text{ N/mm}^2$ and $I = 2 \times 10^8 \text{ mm}^4$
7	Using Castigliano's First (1 st) theorem, find the slope and the deflection at the free end of a cantilever beam of span 6m and subjected to a UDL of 30 kN/m throughout the span.
8	Determine the deflection at point C of an overhanging beam as shown in Figure - 6 . Adopt $E = 2 \times 10^5 \text{ N/mm}^2$ and $I = 2 \times 10^8 \text{ mm}^4$.
9	Determine the rotation at the free end of the beam shown in Figure - 7 by Castiglione's theorem. $EI = 2 \times 10^{13} \text{ Nmm}^2$.
10	Determine horizontal and vertical displacements of point C for the frame loaded as shown in Figure - 8 using unit load method. Take EI = Constant
11	Calculate the vertical displacement at free end C for the cantilever bent as shown in the Figure - 9 .

MOMENT DISTRIBUTION METHOD

[Professional Elective]

Title of Subject STRUCTURAL ANALYSIS - II

#	Questions
1	Determine the support moments using moment distribution method for the frame as shown in Figure - 1 . Also draw Bending Moment diagram.
2	Analyse the Portal frame shown in Figure - 2 by Moment Distribution Method and draw Bending Moment Diagram and Shear Force Diagram.
3	Define the term 'sway'. Enlist the situation wherein sway occur in portal frames.
4	Determine the support moments and draw BMD for the beam shown in Figure - 3 by Moment Distribution Method.
5	Determine end moments for frame loaded as shown in Figure - 4 using Moment Distribution Method. Take $EI = \text{constant}$ for all members
6	Analyse the two-story portal frame shown in Figure - 5 .
